

ABSTRACT OF THE DISCLOSURE

An attachment to a sprinkler head allowing for the flushing of water and debris from the sprinkler head after servicing thereof, without saturating the site of the sprinkler head with the flushed water. The device comprises a body having a first arm directing water generally upwardly from the sprinkler head, and a second arm for directing water away from the site of the sprinkler head. A third arm is provided for engagement by a user to facilitate connecting and disconnecting of the attachment to the sprinkler head.
